Response to Arguments

Applicant's arguments, see pages 7-9 of the remarks and pages 1-4 of the declaration by Paul Scott, filed 2/2/2005, with respect to claims 1-3, 9-12, 21 and 22 have been fully considered and are persuasive. The remarks and the declaration distinguish the claimed invention from the instant application's disclosed prior art by stating the prior art does not disclose the "selected phase of a first multi-phased clock signal" as stated in the claims. The rejections of these claims have been withdrawn.

Allowable Subject Matter

Claims 1-16 and 21-23 are allowed.

The following is an examiner's statement of reasons for allowance: the instant application's disclosed prior art does not disclose all the limitations of the claims as stated above and in the Applicant's remarks and the declaration filed 2/2/2005. Mori et al (US 4,727,541) discloses a circuit similar to the instant application's disclosed prior art in figure 1. Mori mentions information about the clock signal and reducing the phase deviation between the first and second data trains (column 4, lines 21-31) but does not disclose the first circuit configured to present a parallel output data signal in response to a selected phase of a plurality of phases of a first multi-phased clock signal as stated in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
